

FOR YOUR BUSINESS / YOUR TEAM / YOUR TOOLS

AI that fits the way you work.

We help you choose the right AI tools, offer one-to-one or team training, and set up agents that work with the apps and systems you already use.

FROM TRYING AI TO USING IT EVERY DAY

+ AI

01 / CHOOSE

Choose what fits.

ChatGPT, Codex, Claude Code, Grok Bot and more. Chosen for your work.

02 / LEARN

Build your skills.

One-to-one or team training on real tasks, with methods to use again.

03 / BUILD

Put AI to work.

Connected apps, repeatable workflows and agents you can message.

BUILT BY SLIM SOFTWARE

We build software, AI systems and synthetic employees. We bring that experience to the tools and workflows we recommend.

LET'S FIND A STARTING POINT

info@slimsoftware.co

Pricing is custom to your scope.

PRACTICAL HELP / FROM LEARNING TO IMPLEMENTATION

The right tools. The skills to use them.

We start with what you or your team need to get done. Then we choose the tools, connect the right information and help people build them into their day.

01 / TOOL SELECTION

Choose what earns its place.

We recommend tools around your tasks, budget and existing software, including ChatGPT, Codex, Claude Code and Grok Bot, the agent app available on Mac and iPhone.

02 / PERSONAL & TEAM TRAINING

Learn on your own work.

We offer one-to-one sessions and team workshops, remotely or in person. Practise briefing AI and checking results using your own work, with methods to use again.

03 / SKILLS & WORKFLOWS

Make good work repeatable.

We build custom skills, prompts and workflows for tasks such as meeting preparation, research and regular reports. We test and refine them with your team.

04 / APPS & SYSTEMS

Work across your tools.

We connect AI to apps such as Gmail, Google Calendar, Google Drive, Notion and Slack, and to your existing business systems. We agree access and test the workflow with you.

05 / DEPLOYED AGENTS

Give your agent a job.

We can deploy an agent you message through Telegram. For browser and desktop work, we can offer Glass so you can watch progress and take control when needed.

06 / ONGOING SUPPORT

Keep improving what works.

We answer questions, troubleshoot problems and refine workflows. As your needs change, we help you adapt and review which tools still earn their place.

Start where it helps. We work with business owners and team leads choosing their first AI tools, building team skills or finding a better way to handle recurring work.

FROM USEFUL FIRST STEPS / TO EVERYDAY USE

Start with the work. Build from there.

01 / UNDERSTAND

Find the useful work.

We review your tasks, tools and subscriptions. Together, we choose a starting point and define a good result.

02 / CHOOSE & TRY

Test it on your work.

We recommend the tools, try the first workflows with you and agree which actions need approval.

03 / TRAIN & SUPPORT

Make it part of the day.

We teach you or your team to use the tools and check results, leave clear guidance and offer ongoing support.

PRIVATE + TEAM

Glass.

We built Glass for working with AI agents. In Team mode, colleagues brief the agent, add context and follow its replies in one shared thread. Private mode gives each person their own conversation.

Private: your own conversation

Team: one shared agent chat

Watch browser work and step in

We choose the approach for the job. Glass is optional.

Custom scope. Custom pricing. We agree the advice, training, integrations and support you need. We explain separate subscription and running costs, and help you choose suitable data settings.

Tell us what you are working on.

Tell us what you do, which tools you use and where the work gets repetitive. We will help you choose a useful first step.
